Full-Stack Software Engineer and Technical Project Lead with experience delivering production-ready platforms in regulated environments. Currently leading development and delivery for a multi-client corrections commissary platform — four React/Next.js frontends on a shared TypeScript monorepo, backed by a .NET 9 REST API — approaching production launch.

CORE COMPETENCIES

Full-Stack Development | Technical Project Management | Multi-Client Platform Architecture | Remote Team Collaboration | Distributed Agile Teams | Sprint Planning & Backlog Grooming | Stakeholder Communication | Requirements Translation | OpenAPI / REST API Integration | CI/CD & Version Control | Regulated Systems Delivery | Kiosk & Hardware Integration

TECHNICAL SKILLS

Frontend: TypeScript, React, Next.js, JavaScript (ES6+), PrimeReact, Tailwind CSS, Zustand, TanStack Query, TanStack Table, React Hook Form, Vite, Axios, HTML5, CSS3

Backend & Data: C#, .NET 9, REST APIs, OpenAPI / Swagger, Entity Framework Core, PostgreSQL, Redis, Hangfire, SQL, Node.js, PHP

DevOps & Tools: Docker, Kubernetes, Jenkins, Bitbucket, Jira, Git, AWS, CI/CD, Playwright, Vitest
ethodologies: Agile, Scrum, Iterative Delivery, Code Reviews, WCAG 2.1, ARIA, Lighthouse, Accessibility, Continuous Improvement

PROFESSIONAL EXPERIENCE

CityTeleCoin — Software Engineer & Project Lead

Jun 2022 – Present

- Lead a multi-client commissary platform for correctional facilities — admin dashboard, inmate kiosk, visitation kiosk, and mobile public portal — on a shared TypeScript monorepo, backed by a .NET 9 REST API, targeting production launch.
- Serve as technical lead and project manager: Jira backlog prioritization, sprint planning, stakeholder alignment, Bitbucket PR reviews, Jenkins CI/CD delivery, and cross-team coordination with product and QA.
- Build enterprise UI with PrimeReact, TanStack Query/Table, React Hook Form, and Zustand — complex forms, validation, permissions, and data tables across desktop admin and touch-first kiosk form factors.
- Integrate frontends with backend via OpenAPI-generated TypeScript clients, typed API contracts, facility-scoped permissions, and multi-tenant data access with TanStack Query caching patterns.
- Led WCAG accessibility remediation across 15+ customer-facing PHP pages for a correctional telecom payment portal — ARIA labeling, WCAG AA contrast, keyboard navigation, semantic HTML — validated with Lighthouse (100% accessibility) and WAVE.
- Drive release readiness with Playwright E2E tests, Vitest unit tests, and kiosk deployment via a Node.js daemon for on-site hardware peripherals; earlier, resolved production payment-flow bugs in multi-step checkout (calling cards, account funding, messaging/tablet time) for a system processing real financial transactions via NMI/Heartland gateways.

Ochsner LSU Health Shreveport — Technical & Operational Leadership

2019 – 2022

- Led cross-functional operational improvement initiatives in a highly regulated healthcare environment.
- Coordinated multidisciplinary teams to improve workflow efficiency and compliance.
- Utilized data-driven decision-making to support performance improvements.
- Worked within strict regulatory and quality assurance frameworks.

EDUCATION

MBA – Project Management-LSU Shreveport | Master of Health Science-LSU Shreveport

BS – Cellular & Molecular Biology-LSU Shreveport

MERN Full Stack Web Developer Bootcamp-University of Central Florida

CERTIFICATIONS: Scrum Master Certified (2024), Six Sigma Green Belt, Lean Practitioner
